

ABSTRACT

[PROBLEMS] To provide a polyamide resin composition that is excellent in mechanical strength, heat resistance and
5 adhesive properties to a sealing resin such as an epoxy resin of a molded product and that has no problem when used as precision insert molded products, and provide a reflector plate that realizes a reduced drop of light reflectance when the resin composition is used as the reflector plate.

10 [MEANS FOR SOLVING PROBLEMS] There is provided a polyamide resin composition comprising a specific polyamide resin composition comprising a polyamide resin (A), an inorganic filler (B), and a white pigment (C) whose molded product is excellent in mechanical strength and heat resistance; and
15 also provided a polyamide resin composition further comprising a specific ultraviolet absorber (D), or both an ultraviolet absorber (D) and a hindered amine compound (E) and a reflector plate formed from the resin composition, which realize a reduced drop of light reflectance when the
20 polyamide resin composition is used as the reflector plate.
